

Jacqueline Jiang

AI SAFETY | RED TEAM OPERATIONS | EVALUATION QUALITY

San Jose, CA | jacquelinejiang011@gmail.com | LinkedIn | Portfolio

SUMMARY

AI Safety Analyst and Delivery Operations Lead with experience across adversarial red teaming, multimodal model evaluation, harm-taxonomy development, and final-stage quality assurance. Built misuse-detection frameworks and evaluation systems supporting pre-launch risk assessment through post-deployment integrity monitoring. Converts recurring model and evaluator failures into reproducible rubrics, calibration guidance, and remediation workflows.

CORE EXPERTISE

Adversarial and Threat Analysis: Prompt-injection testing, jailbreak and bypass analysis, misuse modeling, exploitation-pattern detection, safety regression testing

Multimodal Evaluation: Text-to-image, image editing, multi-reference generation, cross-modal reasoning, output-fidelity analysis

Quality Systems: Final-stage QA, evaluator calibration, layered review, root-cause analysis, error remediation, audit documentation

Trust and Safety: Policy enforcement, gray-area review, escalation triage, harm-taxonomy development, coordinated exploitation detection, OSINT research

PROFESSIONAL EXPERIENCE

Handshake | Delivery Operations Lead - AI Evaluation and Red Teaming

Remote, CA
Jul 2026 - Present

- Own final-stage quality assurance across AI evaluation and red-team workflows, reviewing escalated work and enforcing quality standards before delivery.
- Designed and implemented a layered R1/R2 review structure between frontline review and final DOL approval to strengthen controls and catch recurring evaluation errors.
- Lead quality remediation by isolating systemic failure patterns, documenting representative errors, and translating findings into reviewer guidance and process improvements.
- Reintroduced recurring quality and error syncs to align reviewers on standards, surface inconsistencies, and drive remediation.
- Helped formalize ownership across training, review, secondary review, and delivery-lead functions while improving coordination across DOL cohorts.

HandshakeAI | AI Safety and Red Team Analyst

Remote, CA
May 2026 - Jul 2026

- Conducted adversarial evaluations of multimodal AI systems across text, image, and combined-input workflows to identify alignment gaps and model vulnerabilities.
- Assessed text-to-image, image-editing, and multi-reference generation tasks for image understanding, contextual reasoning, and cross-modal interaction failures.
- Performed QA and calibration of red-team evaluations by reviewing prompt quality, annotation accuracy, testing methodology, and evaluator consistency.
- Applied structured prompt-injection methods and attack taxonomies across diverse safety-risk categories.
- Documented findings, identified failure patterns, and delivered structured feedback to improve evaluation quality and consistency.

PROFESSIONAL EXPERIENCE, CONTINUED

LinkedIn | QA Specialist / AI Trainer - High-Risk Behavior Evaluation

Remote, CA
Apr 2026 - Jun 2026

- Audited AI safety evaluation tasks across sensitive domains including social profiling and crisis response, ensuring outputs met enterprise-grade quality standards.
- Corrected systemic labeling errors including severity inflation, over-interpretation of ambiguous signals, and misuse of unsafe-compliance labels.
- Enforced behavior-based standards so outputs were evaluated on observable actions rather than inferred intent; delivered structured quality reports.
- Served as final-approval QA reviewer across gray-area and edge-case inputs, improving consistency and reducing re-evaluation cycles.
- Evaluated model robustness against subtle manipulation and ambiguous risk signals relevant to conversational-agent safety.

Meta | AI Safety Analyst - Generative AI Red Team, Media Safety

Menlo Park, CA
Nov 2023 - Nov 2025

- Conducted adversarial investigations across high-risk misuse domains - including CSAM-adjacent content, sexual violence, hate, criminal facilitation, and coordinated exploitation - before product launch.
- Developed prompt libraries, manipulation taxonomies, and bypass-scenario catalogs used to surface policy gaps, evaluate guardrails, and inform detection strategy.
- Conceptualized RedVault, a centralized GenAI safety hub; defined workflows and grading modules that consolidated findings and attack taxonomies across teams.
- Influenced rollout of RedOps by providing early feedback, testing the first production use case, and helping replace fragile spreadsheet workflows.
- Led pre- and post-launch safety evaluation for multimodal generative products including Stickers, Imagine, MagicMod, Emu, Animate, MEmu, UGC AI Studio, and MetaAI Chat Agents.
- Pioneered multilingual and cross-cultural edge-case testing to surface policy blind spots across diverse user populations.
- Partnered with safety engineers and policy stakeholders to translate adversarial findings into guardrail and policy recommendations.

Meta | Quality Assurance Analyst / SME - Monetization Integrity

Mountain View, CA
Feb 2022 - Apr 2023

- Audited 250+ monetization appeal cases weekly, producing quality insights and root-cause analysis reports for Meta stakeholders.
- Identified systemic policy-enforcement errors through structured audits, reducing team error rate by 30%.
- Delivered weekly quality and RCA presentations using platform-abuse data and harm-taxonomy analysis to guide corrective action.
- Mentored incoming analysts and led the global handoff to the Hyderabad QA team during a major restructuring.

Meta | Media Operations Analyst - Monetization Integrity

Mountain View, CA
Feb 2020 - Feb 2022

- Reviewed 800+ moderation tasks weekly across Facebook and Instagram, identifying violations involving self-harm, graphic violence, exploitation, misinformation, and privacy.
- Maintained policy compliance across high-volume content-enforcement workflows while helping reduce review backlog.
- Served as training lead for 40+ analysts, designing onboarding material and collaborating on copyright and revenue-fraud detection protocols.
- Consistently exceeded SLA accuracy targets above 99.3% across high-volume abuse and exploitation queues.

EDUCATION

University of California, Riverside | B.A., Sociology
Sep 2013 - Aug 2017 | Riverside, CA
